PROFESSIONAL PROFILE

Analytical professional with over **ten years of experience** in evaluating both traditional search results and, more recently, AI-generated content using structured quality guidelines.

Since October 2015, I have worked remotely as a **Search Engine Evaluator at Appen**, applying detailed quality guidelines to assess Google Search Engine Results Pages (SERPs), AI Overview responses, AI Mode outputs, webpages, websites, image search results, and audio search samples.

My work has developed expertise in objective decision-making, interpretation of evolving evaluation guidelines, reading comprehension, evidence-based reasoning, and structured documentation across diverse information domains. Combined with a background in Computer Science Engineering and continuous professional development in AI evaluation, technical communication, and analytical problem solving, I bring a disciplined approach to evaluating information, verifying claims, and communicating findings clearly.

I am seeking opportunities in AI evaluation, research verification, document review, data labelling, writing evaluation and content quality assessment, where careful human judgment contributes directly to building reliable AI systems.

PROFESSIONAL EXPERIENCE

Search Engine Evaluator – Appen | Remote

26 October 2015 – Present

Worked on Google's search quality evaluation initiatives by applying detailed evaluation guidelines to assess search results, AI-generated responses, webpages, websites, image search results, and audio search samples.

Key Contributions

- Evaluate Google Search Engine Results Pages (SERPs), AI Overview responses, AI Mode outputs, webpages, websites, image search results, and audio search samples by applying detailed quality guidelines to assess relevance, usefulness, credibility, authority, and overall information quality.

- Interpret and apply Google's evolving evaluation guidelines consistently across long-term projects, requiring disciplined judgment, careful reading comprehension, and objective decision-making.
- Assess relevance, credibility, usefulness, and overall quality of diverse online content while maintaining objectivity and consistency.
- Evaluate information spanning technology, science, business, education, health, culture, and current affairs, demonstrating the ability to understand unfamiliar topics quickly and evaluate them objectively.
- Distinguish subtle differences in search quality, webpage authority, AI-generated responses, user intent, and content usefulness through structured analysis and evidence-based reasoning.
- Identify quality issues, inconsistencies, and relevance gaps by comparing multiple information sources against documented evaluation criteria.
- Adapt efficiently to guideline revisions and evolving evaluation methodologies while maintaining consistency and high-quality evaluation standards.
- Work independently in a remote environment, managing assigned evaluation tasks responsibly while maintaining accuracy, consistency, and professional accountability.
- Maintain continuous engagement with Appen through repeated contract renewals from October 2015 to the present, reflecting sustained performance and long-term reliability.

FEATURED PROJECT

Gen-Z Career Aspirations Research Project

21 January 2025 – 3 March 2025

Designed and executed an end-to-end research & analytics project on Gen-Z career aspirations, including business problem definition, survey design, data preparation, exploratory analysis, SQL-based analysis, dashboard development, and stakeholder-focused recommendations.

Link: <https://github.com/ArjunSingh-9/Analysis-of-Gen-Z-s-Career-Aspirations>

Key Activities

- Designed and executed an end-to-end research and analytics project to investigate Generation Z career aspirations, from problem definition and survey design through stakeholder presentation.
- Collected primary survey data, cleaned and standardized the dataset using Excel and Power Query, and performed exploratory analysis and SQL-based business queries to identify meaningful trends.
- Developed interactive dashboards in Excel and Power BI and translated analytical findings into actionable recommendations addressing the expectation gap between Gen-Z professionals and employers.
- Demonstrated structured research methodology, evidence-based reasoning, analytical reporting, and stakeholder-focused communication through a comprehensive final presentation.

SELECTED WORK

Technical Writing Portfolio

A public portfolio of technical articles covering software, AI, data analysis, and technology.

Link: <https://github.com/ArjunSingh-9/Technical-Writing-Portfolio>

Additional Analytical Projects

Representative portfolio projects demonstrating structured analytical reasoning and evidence-based problem solving: Bank Loan Analysis, Coffee Shop Sales Analysis, Pizza Sales Analysis, India General Elections Analysis.

CORE COMPETENCIES

AI & Information Evaluation: Search Quality & AI Response Evaluation, Document Review, Content Quality Assessment, Guideline Interpretation, Reading Comprehension, Data Labelling

Research & Verification: Online Research, Fact Verification, Source Credibility Assessment, Cross-Referencing, Information Validation, Structured Documentation

Writing & Communication: Technical Writing, Editing & Proofreading, Evaluation Documentation, Written Analysis, Structured Feedback, Grammar & Language Quality

Analytical Skills: Attention to Detail, Critical Thinking, Logical Reasoning, Pattern Recognition, Comparative Analysis

Technical: Python, SQL, Excel, Power BI, GitHub, Jupyter Notebook

EDUCATION

Bachelor of Technology (B.Tech.) – Computer Science Engineering
Guru Gobind Singh Indraprastha University (GGSIPU), 2014

PROFESSIONAL DEVELOPMENT

- Google Technical Writing Course
- Patrick Barry's – Good with Words Course
- IBM Data Analyst Professional Certificate

PROFESSIONAL INTERESTS

- AI Evaluation & Human Feedback
- Research & Verification
- Document Review
- Data Annotation
- Technical Writing
